

Upperbody Laser™

With the vehicle's centre line as guideline!

Everyone working on bodies and upperbody damage know how lengthy and demanding that work can be. Especially in repairing body side damage (A-, B- & C-pillar etc.) so that windows and doors fit correct and give no problem with fit & finish.

Measures from the centreline out

The product works with 2 laser beams, one on each side of the vehicle, that are parallel to the vehicle's centre line. The laser beam allows you to compare the damaged side with the undamaged, giving you exact measurements to set the damaged area.

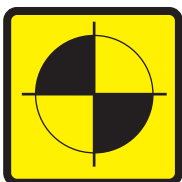

Art.no: UB200

Includes:
Complete Upper Body Laser system with scales, bench & universal mountings

Delivered in a heavy duty storage case.

Upperbody Laser benefits:

- Quick and easy to setup
- Guarantee accuracy of side damage repairs
- Allows the adjustment of new parts such as doors, pillars etc and minimizes unnecessary adjustments
- Universal mounting bracket allows mounting the laser on all types of vehicles
- Standard supplied with attachments for mechanical measuring systems and fixture benches (Celette and Car-OLiner).
